

Sysadmin Academy

IBM-HACMP Administration

Exam Code # 000-237

Duration : 24 Hrs

Overview

Learn to design, plan, and configure a highly available cluster of IBM pSeries nodes running AIX 5.3 using the High Availability Cluster Multi-Processing HACMP 5.3 software.

Get an introduction to the basic concepts, design, and planning considerations and examine the steps necessary to configure the HACMP 5.3 startup, fallover, and fallback behavior policies.

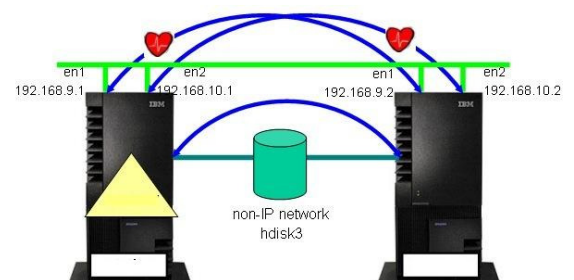

The lab exercises are conducted on AIX 5.3.

Course Outline

- *Introduction to HACMP*
- *Networking considerations for Clustering.*
- *Shared storage considerations for Clustering.*
- *Planning for applications and resource groups*
- *HACMP installation*
- *Initial cluster configuration*
- *Basic HACMP administration*
- *Events*
- *Integrating NFS into HACMP*
- *Problem determination and recovery*

Prerequisites

You should be qualified as IBM Certified Specialists - p5 and pSeries Administration and Support AIX 5L and have TCP/IP, LVM storage and disk hardware implementation skills .
